8 Abstract:

PROBLEM TO BE SOLVED: To produce an irritant for a blended cement usable mainly in a civil engineering contruction industry and capable of preparing a blended cement composition having good ininitial strength manifesting property and a large neutralization suppressing effect.

SOLUTION: The irritant for the blended cement is formed by heat treating a blend containing a CaO starting material, an Al2O3 starting material and a CaSO4 starting material and composed of a mineral group with a free lime, hauynite and anhydrous gypsum as an active principle and has =3,000cm2/g Blaine value and =20µm average grain size, and has CaO/Al2O3mol. ratio of 7.5-18 and CaSO4/Al2O3mol. ratio of 1.6-4. The blended cement composition is formed from cement and this irritant for the blended cement.
